

# The “Index Fund” of Undiscovered Cryptos

weiss crypto

This is not an index fund you can buy in the stock market. Nor is it a cryptocurrency you can buy on a crypto exchange.

Instead, it's a crypto that's undiscovered in two ways:

**First**, the **ONLY** way you can buy this crypto today is with our back-door method I told you about.

This way, you have the opportunity to buy it **BEFORE** it's listed on any major exchange and before nearly all other investors buy.

Better yet, this way, you have the opportunity to make many times more than other investors could make.

If you used this backdoor method to buy **Synthetix (SNX)** before it was listed on a major exchange, you could have made six times as much as someone who waited.

Investors who got into **Yearn.finance (YFI)** before it was listed on a major exchange fared even better ... making an impressive 125 times more than those who waited.

**Second**, this crypto gives you a stake in a diversified portfolio of cryptos that are also undiscovered.

That's right. The crypto we name in this report is undiscovered. And it **INVESTS** in cryptos that are undiscovered, giving you a huge head start with a diversified portfolio of up-and-coming cryptos that could, collectively, be among the next Bitcoins, in terms of how much new wealth they create for investors.

I repeat: You **CANNOT** buy this high-powered crypto fund from any broker or on any established crypto exchanges.

You can only buy it with the backdoor, early-bird buying method we talked about today.

And yet, this one crypto could be among **THE** biggest opportunities you have before you today.

I'm talking about ...

# Yield Guild Games: Riding Two of Crypto's Hottest Megatrends

This virtually unknown crypto can help you profit from two of the hottest megatrends today.

The first megatrend is online gaming.

Believe or not, as many as 3.1 billion people (40% of world population) will collectively spend a whopping \$174 billion on online gaming platforms in 2021.

And any more pandemic problems will only fuel this growth even further.

There's even more explosive growth in the second megatrend — non-fungible tokens (NFTs).

These are typically one-of-a-kind cryptos that certify ownership of unique assets like artwork.

**And already, the market cap of NFTs has shot up more than 1,700%.**

Just this year!

This undiscovered crypto is right in the sweet spot where these two red-hot megatrends intersect.

We believe by having it in your portfolio, you're going to have a tiger by the tail.

Yield Guild Games operates much like an index fund, but in the world of crypto.

And it gives you a vehicle for profiting from the growth in the hottest online games on the blockchain.

Let's peel off each layer of this opportunity one by one, and you'll see just how big it could be ...

## Play-to-Earn (P2E)

The play-to-earn sector is red-hot mainly because it ingeniously combines having fun with making money.

Game playing — even vicariously — is an end in itself. Just ask any sports fan.

Combine that kind of enjoyment and excitement with a modest income ... and it's easy to see why P2E is going viral — both inside and outside of crypto.

As in crypto-based economies, gamers must have upfront capital in order to participate. YGG helps create high-paying jobs for thousands of people by lending players necessary in-game items.

Axie Infinity, a popular NFT-based online game, is a great example. YGG lends in-game assets to Axie players as a loan. The players are entitled to 70% of what they earn in-game, while 20% goes to the community managers. The remaining 10% goes to YGG's treasury.

Right now, players can earn \$800-900 per month for themselves, providing a great incentive for onboarding thousands of players per month ... especially those from emerging markets. And it's also great for YGG, as the treasury gets fatter and fatter.

We think this model of collaboration is going to turn the gaming world upside down ... and along the way, help pile up massive profits for investors.

In less developed countries — where millions live on \$3 a day (or less) — that's a lot of money. And even in the most modern economies, it's still a great incentive for gamers who would already be playing even if they didn't make a dime.

It's a key reason play-to-earn games like Axie Infinity are spreading like wildfire. Indeed ...

**Revenue generated by the Axie platform nearly doubled from \$100 million in January to \$196 million last month.**

Yikes! Who wouldn't want to own a piece of that stream of income?

No wonder investors are scrambling for ways to invest in play-to-earn gaming and related NFTs.

And now, YGG gives average investors — without gaming or blockchain expertise — a way to profit from this juggernaut growth without having to pick individual games or NFTs.

## Yield Farming on YGG

But there's more to YGG than just buying and selling NFTs at a profit. It also engages in yield farming and arbitrage opportunities.

YGG's deep connections in the industry empower it to invest in red-hot, yet-to-be-released games BEFORE average investors get a chance. One of them that's in the pipeline is the forthcoming and much-anticipated Star Atlas.

Indeed, YGG's portfolio already includes ...

1. 20,000 NFT assets worth \$10 million. These cover virtual real estate, Zed Rune Horses and Axies (creatures who populate Lunacia). YGG also "farms" much of the virtual land it owns, to earn additional crypto income.
2. Major stakes in eight play-to-earn games. Some have just launched; some are launching soon, such as the Star Atlas game.
3. Other cryptos: \$400 million worth of YGG, \$18 million worth of USDC, \$10 million of AXS (the Axie Infinity token), \$3 million in ETH and some others.

In addition, some of these assets are deployed in DeFi protocols — like Sushiswap (SUSHI), Yearn (YFI) and Aave (AAVE) — to earn additional crypto yield.

And guess what! YGG is just getting started!

## No Investment is Without Risk

Is this the kind of investment that you should buy with your keep-safe funds?

Of course not; it's a bet on a very new type of asset that's just beginning to break ground in an emerging new world of crypto.

The great advantage it provides is diversification. That gives you a measure of stability. But it also comes with unique risks. We don't think they're deal-killers. (If we did, we would not be recommending YGG.)

But still, we do want to you to be fully aware of them ahead of time. That way, no matter what may happen in the short term, we trust you can stay focused on what could be a tremendous wealth-building opportunity in the long term.

Here are the possible risks we see in YGG ...

**Whales.** About 30 seconds after the token launched, 34 big-foot investors scarfed up nearly all of them. To be sure, ownership has diversified since then — there are now more than 5,000 investors. But even so, remaining whales could still dump some portion of their big holdings whenever they so decide, causing sharp price corrections.

This play-to-earn revolution is still in its early days. That means some things can still go wrong, as they often do. Murphy's law remains in force. However, we believe YGG is well-positioned to navigate any turbulent waters ahead.

**Future competition.** In a universe as fast-moving as this, there's always a chance some developer could suddenly pop up with a better product. Fortunately, in the crypto world, being first often trumps being best. Accordingly, we think YGG's first-mover advantage will help shield it, while the diversification of its portfolio helps protect investors like you.

But, in our eyes, the pros outweigh the potential cons for this crypto. YGG tokens can be staked to earn rewards, get exclusive content, vote on governance and more.

And to make things transparent for investors, YGG will provide a portfolio tracking page on its website, allowing anyone to see financial and performance data in real time.

## How to Buy YGG

YGG is an undiscovered crypto. So don't expect to see it listed on any of North America's big crypto exchanges. Even global exchange giant Binance doesn't have it yet.

But remember, this is actually a good thing. It means you can get in before the thundering herd.

Now, knowing when to invest is just as important as knowing what to invest in. As such, we recommend waiting for our signal, either in our monthly Weiss Crypto Investor newsletter or in a Flash Alert, to buy YGG at the best price to maximize gains.

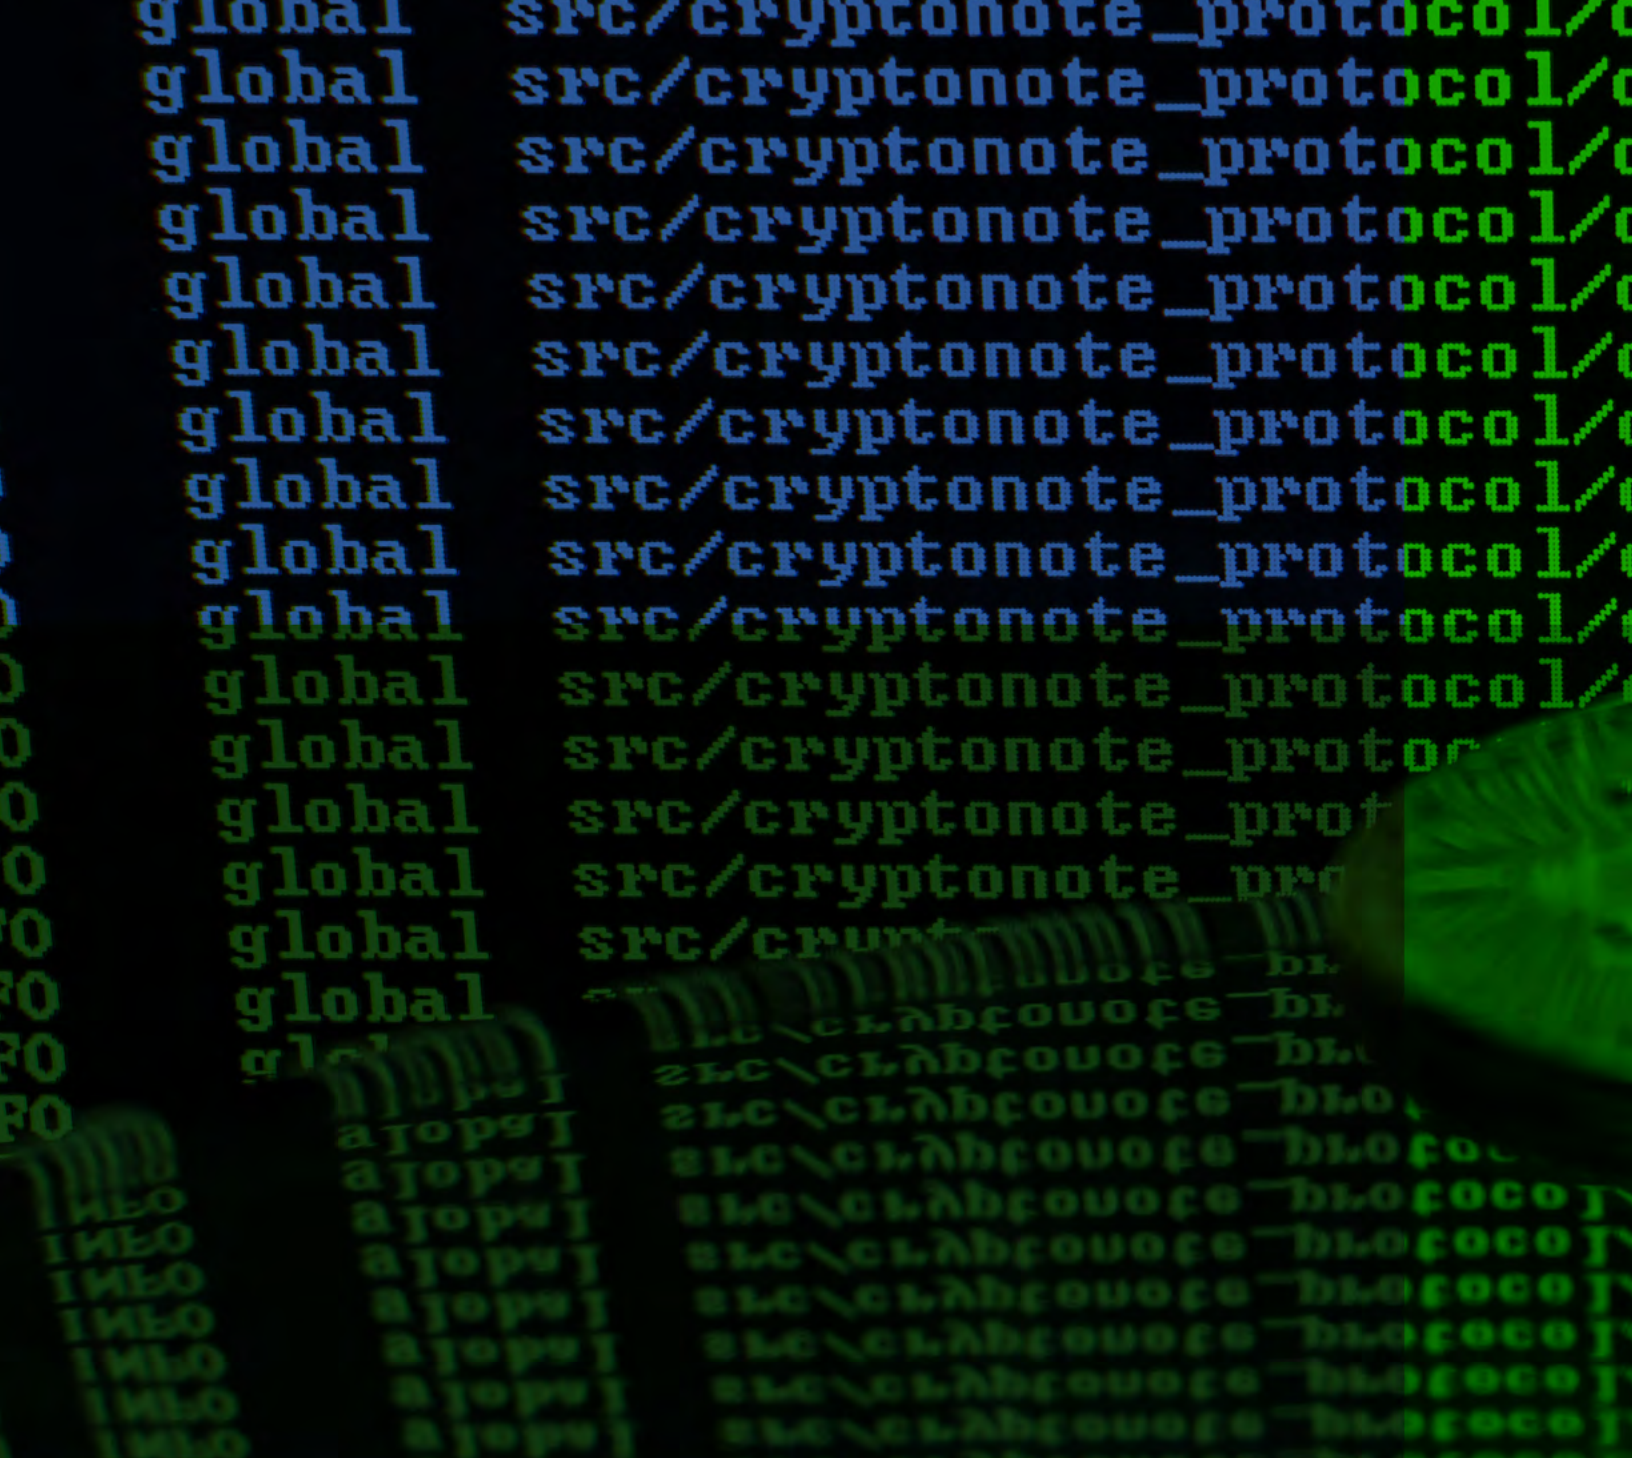

When we do flash that “buy” signal, you’ll need to follow these simple steps ...

**Step 1.** Prepare your MetaMask wallet to hold YGG. You do that by clicking on “Add token,” and then pasting in YGG’s contract address:

**0x25f8087ead173b73d6e8b84329989a8eea16cf73**

If you need help setting up a MetaMask wallet for the first time, watch [this](#). If you need help funding your MetaMask, watch [this short video](#). if you’re sending from Kraken, or watch [this one](#) if you’re sending from Coinbase.

**Step 2.** Use decentralized exchange Uniswap to exchange crypto in your MetaMask wallet to YGG. If you need help, watch [this video](#). But be sure to use the contract addresses cited above.
